Date: 29/1/2022

A FINAL YEAR PROJECT REPORT  
SUBMITTED IN PARTIAL FULFILLMENT OF THE  
REQUIREMENTS FOR THE DEGREE OF BACHELOR OF  
INFORMATION ENGINEERING DEPARTMENT OF  
INFORMATION ENGINEERING  
THE CHINESE UNIVERSITY OF HONG KONG

## **I. Work done in the past week**

Finished the Inventory system for books, Including the upload and display functions which allows user to upload and see what they have uploaded in a list view.

## **II. Challenges / problems faced**

For the upload part, we need to figure out how are we going to store the book image that user uploaded. For me, I used the imgur api to save the image, which then the api will return a link and the delete hash for the image user uploaded. We then store up the link and the hash into our database for later display use.

## **III. Tasks planned to be done in the coming week**

Set up the AWS server for hosting the index.js, which will help us process out API requests on a web server, which then we won't need to set up the node server each time and provide a services that other device outside the local network can connect.
